New Ways of Writing 2000 computer based mathematical modeling the technique of representing and managing models in machine readable form is still in its infancy despite the many powerful mathematical software packages already available which can solve astonishingly complex and large models on the one hand using mathematical and logical notation we can formulate models which cannot be solved by any computer in reasonable time or which cannot even be solved by any method on the other hand we can solve certain classes of much larger models than we can practically handle and manipulate without heavy programming this is especially true in operations research where it is common to solve models with many thousands of variables even today there are no general modeling tools that accompany the whole modeling process from start to finish that is to say from model creation to report writing this book proposes a framework for computer based modeling more precisely

it puts forward a modeling language as a kernel representation for mathematical models it presents a general specification for modeling tools the book does not expose any solution methods or algorithms which may be useful in solving models neither is it a treatise on how to build them no help is intended here for the modeler by giving practical modeling exercises although several models will be presented in order to illustrate the framework nevertheless a short introduction to the modeling process is given in order to expound the necessary background for the proposed modeling framework

Writing Space 1982 the study of linguistics has been forever changed by the advent of the computer not only does the machine permit the processing of enormous quantities of text thereby securing a better empirical foundation for conclusions but also since it is a modelling device the machine allows the implementation of theories of grammar and other kinds of language processing models can have very unexpected properties both good and bad and it is only through extensive tests that the value of a model can be properly assessed the computer revolution has been going on for many years and its importance for linguistics was recognized early on but the more recent spread of personal workstations has made it a reality that can no longer be ignored by anyone in the subject the present essay in particular could never have been written without the aid of the computer i know personally from conversations and consultations with the author over many months how the book has changed if he did not have at his command a powerful typesetting program he would not have been able to see how his writing looked and exactly how it had to be revised and amplified even more significant for the evolution of the linguistic theory is the easy testing of examples made possible by the implementation of the parser and the computer held lexicon indeed the rule set and lexicon grew substantially after the successes of the early implementations created the desire to incorporate more linguistic phenomena

Three Essays on Computer and Internet Use at Home 2015-04-29 this dissertation consists of three essays on computer and internet ci use in the united states households surveys show that the adoption and use of these two technologies at home have been steadily increasing over time in addition to providing information regarding the use of ci at home the essays seek

to address a number of issues the first essay investigates the factors that determine the probability of owning a home ci and those influencing the intensity of use by employing the double hurdle model the double hurdle estimation reveals that the use of a home ci is governed by two distinct decisions the decision to acquire ci and the decision on the level of use the estimation results also show that these two separate decisions are determined by different sets of factors the second essay develops a theoretical model that incorporates ci use in a representative individual s preference function and examines whether the use of ci at home produces any time displacement effects on the allocation of time for market work household production and leisure the study is based on the conceptual framework that the use of technological innovations at home changes the existing patterns of individuals time allocation behavior empirical estimations are also employed to determine the net impacts of the parameters of the model on the choice variables under investigation the third essay explores the dissemination of home computers and access to home internet among various social groups in the united states the inequalities observed among each group known as the digital divide the trends the groups exhibit in the acquisition of these technologies over time and the factors contributing to these disparities the study focuses on the digital divide observed among three demographic groups race ethnicity and gender in the period 1997 2003 the digital gaps for blacks and hispanics compared to whites and non hispanics respectively are relatively big and show a rising trend over time the gender digital gap is relatively small and shows a slight declining trend a variant of the blinder oaxaca decomposition technique is employed to identify and quantify the factors that contribute to the digital gaps
